

2) Design a web page using CSS (Cascading Style Sheets) which includes the following: Use different font, styles: In the style definition you define how each selector should work (font, color etc.). Then, in the body of your pages, you refer to these selectors to activate the styles

Program

```
<!DOCTYPE html>
<html>
    <head>
        <title>Internal CSS</title>
        <link rel="stylesheet" href="styles.css">

        <style>
            .main {
                text-align:center;
            }
            .class1 {
                color:brown;
                background-color:white;
                font-size:50px;
                font-weight:bold;
                font-family: "Brush Script MT", cursive;
            }
            .class2 {
                color:blue;
                background-color:yellow;
                font-family: "Courier New", Courier, monospace;

                font-style:bold;
                font-size:30px;
            }
        </style>
    </head>
    <body >
        <div class = "main">

            <div class ="class1"><h1>WELCOME TO VVIT</h1>
            </div>

            <div class ="class2">
                III-II IT LAB INTERNAL EXAMINATION
            </div>
            <h1 style="color:blue;">WEB TECHNOLOGIES</h1>
            <br>
```

```
<h2>EXTERNAL CSS</h2>
```

```
</div>
```

```
</body>
```

```
</html>
```

Styles.css

```
body {
```

```
    background-color: powderblue;
```

```
}
```

```
h2 {
```

```
    color: red;
```

```
}
```

Output:
